FCC COMPLIANCE STATEMENT

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Introduction

Thank you for purchasing a StarTech.com StarView DVI KVM switch. Now you can share your DVI monitor or flat panel display, keyboard, and mouse between two (SV221DVI) or four (SV421DVI) DVI-enabled computers. These KVM switches are designed especially for DVI-I interfaces to ensure the distortion-free, crystal-clear images associated with flat panel monitors.

Features

- Allows you to share one DVI monitor, PS/2 mouse, and PS/2 keyboard between multiple computers
- DVI-I interface supports both digital and analog video signal transmission
- Supports PS/2 keyboards and mice, including M/S Intellimouse[®], Intellimouse Explorer[®], and Logitech Netmouse[®]
- Supports high digital resolution of up to 1600x1200 and analog resolution of up to 1920x1440
- Support for multiple operating systems: Windows XP, 2000, Me, 98, 95, DOS, Linux, etc.

Package Contents

This package should contain:

- 1 x StarView DVI KVM switch

Installation

1. Make sure that all your computers and peripherals are turned off.
2. Connect your keyboard, monitor, and mouse to the **console** ports (with the white background) on the back of the KVM switch.
3. Connect each of your PCs to one of the numbered PC ports on the back of the switch. You can use individual standard PS/2 keyboard, PS/2 mouse, and DVI video cables to connect the KVM switch to your PCs.

Note: Your KVM switch is powered by the PS/2 ports. Once your KVM switch is connected to your PC's PS/2 ports, the KVM is powered.

4. Turn on your connected computers. Do not perform any activities on the KVM switch until the PCs have properly booted or your DVI interface may not be properly initialized.

Using Your KVM Switch

There are two ways to access your connected computers: the front panel pushbutton or a hotkey sequence.

Using the Pushbutton

Pressing the pushbutton on the front of the KVM switch allows you to scroll through your computers sequentially.

Using the Hotkey Commands

A keyboard hotkey sequence consists of three keystrokes. Each hotkey sequence starts with **two Scroll Lock** keystrokes. You must strike the Scroll Lock key twice in two seconds or less in order for the hotkey sequence to be acknowledged.

Command	Hotkey Sequence	Description
Select PC	ScrLk + ScrLk + 1 (2, 3, 4)	Selects the PC plugged into Port 1 (2, 3, 4)
Next lower PC	ScrLk + ScrLk + Up	Selects the next (lower) PC.
Next higher PC	ScrLk + ScrLk + Down	Selects the next (higher) PC.
Start Autoscan	ScrLk + ScrLk + S	Starts autoscan mode. You can quit autoscan mode by pressing any key.
Autoscan Beep	ScrLk + ScrLk + B	Toggles on/off the confirmation beep while in autoscan mode.
Reset KVM	ScrLk + ScrLk + End	Resets the KVM switch.

Troubleshooting

Keyboard/mouse problems

- You should have connected your keyboard, mouse, and monitor to the KVM switch before connecting the switch to your computer. If you reversed this process, try rebooting your PCs.
- Make sure the mouse/keyboard are properly connected to the KVM switch and that you have installed the proper drivers for your mouse/keyboard.
- Try rebooting your KVM switch by pressing **ScrLk + ScrLk + End**.
- If your keyboard/mouse came unplugged while in operation, you may need to reboot your PCs in order to get the switch to recognize the keyboard/mouse again.

Video problems

- If your screen won't show properly on your monitor, first make sure that all your cables are firmly seated in their proper ports.
- If your screen is coming up blank or striped, the resolution on your PC may be higher than the maximum resolution supported by the KVM (1920 x 1440 analog, 1600 x 1200 digital). Adjust the screen resolution and frequency until they are in the supported range.
- If there is ghosting, speckles or stripes on your screen, there may be excessive electromagnetic interference from an external source. Check the path of your video cable for strong electromagnetic sources like motors or power cables. Try and keep your video cables as far as possible from these external sources.

Technical Specifications

	SV221DVI	SV421DVI
User Ports	1	1
Computer Ports	2	4
Analog Resolution (Maximum Pixels)	1920 x 1440	1920 x 1440
